

## Stores Module

### Location Tracking To Stores Rooms For Medical Instruments & Devices

#### Key Benefits:

- ✓ Manage multiple store rooms
- ✓ Move inventory from one location to another
- ✓ Report on stock levels
- ✓ Consolidate multiple store room inventory

#### Features:

- ✓ Locate inventory near point of use
- ✓ Manage stock levels
- ✓ Quickly locate & re-distribute stock
- ✓ Manage expiry dates

#### Remote Stores Inventory Management

The FingerPrint Stores modules enables you to control multiple medical device store locations across your hospital.

Each stores module enables users to receipt into and dispatch from each location and are all centrally linked back to Tracker Administration system.

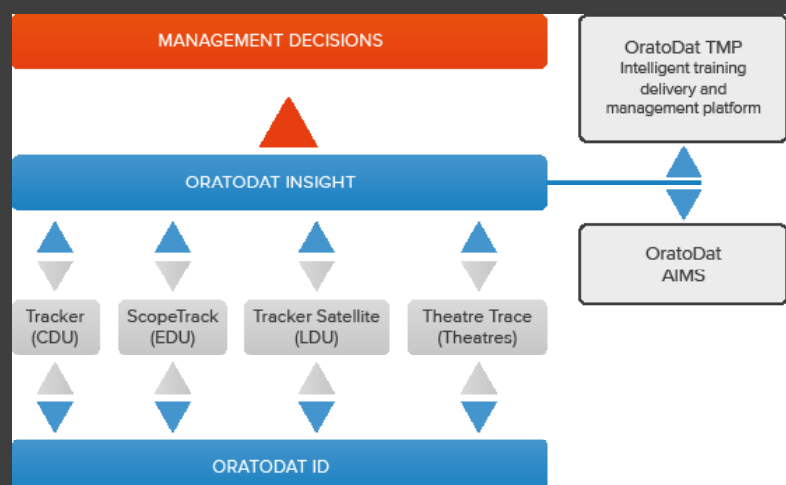

Registered Tracker users in theatres, sterile services and endoscopy can use their system logins to track receipt and distribution of stock and those outside this group can be setup to utilise their hospital ID numbers if required.

The Stores module can produce delivery notes for inventory being distributed to multiple delivery points which speeds up distribution and improves instrument availability. From Tracker Administration you can remotely view stock levels, manage delivery locations, expiry dates and maintain real-time visibility of your distributed inventory.

## Intelligent equipment lifecycle management for healthcare providers

Improve your department's compliance and efficiency with our OratoDat-enabled software solutions, available for:

- > Endoscopy reprocessing units
- > Multi-site reprocessing
- > Theatres
- > Local clinics and dentists
